EDUCATION

Louisiana State University, Baton Rouge, LA **Spring 2027**
Bachelors of Science in Computer Science (Data Science and Analytics), Robotics Engineering Minor Overall GPA: 4.056
Relevant Coursework: Intro to Robotics, Intro to Data Science and Analytics, AI and LLM Development for Business, Computer Networks
Organizations: National Society of Black Engineers (NSBE), Society of Peer Mentors (SPM), Colorstack, Tau Beta Pi, Black Data Processing Association

EXPERIENCE

Chevron Houston, TX
Software Engineering Intern May 2026 - August 2026

- Developed a full-stack web application using .NET (C#), Angular/TypeScript and configuring deployment through Azure Pipelines and Ansible to implement API-driven data retrieval and improve document delivery services.
- Reduced datasheet retrieval times by 82% (40s to 7s) through workflow automation, streamlined UI design and backend system integrations such as caching.
- Delivered a solution estimated to generate $225k in annual value opportunity per manufacturing facility by reducing manual effort, accelerating engineering workflows and supporting future AI-enable capabilities.
- Engineered an AI agent using Azure AI Foundry and Azure Document Intelligence to build a custom extraction tool, fully automating document revision workflows.

Chevron Houston, TX
Software Engineering Intern May 2025 - August 2025

- Saved **8,000 hours** of labor annually by innovating and deploying a rule-based model that automated the sorting and relevancy-ranking of P&IDs, enabling individuals to focus on higher priority work.
- Developed a scalable ETL pipeline using Databricks and PySpark to consolidate diverse data sources and securely transfer payloads to a third-party partner to integrate into a Digital Twin.
- Optimized a critical data pipeline to achieve a 90% improvement in processing speed, substantially lowering cloud compute resource power by testing on Azure Data Factory.

Shell Remote
Data Engineering Intern January 2025 – May 2025

- Designed and implemented a database using project requirements resulting in a solution to manage and control structured and unstructured data throughout the project for a end-to-end image processing pipeline for an automated vision learning model that detects faulty railcar seals.
- Integrated the production version of a Computer Vision model into a dockerized Flask application that allowed for users of the application to easily interact with the model.
- Applied image compressing techniques to **save memory performance and about 25% in cloud compute costs** when interacting with Azure SQL Database and sending data to the Azure Blob Storage.

Louisiana State University – Information Technology Services Baton Rouge, LA
Student Software Engineer January 2024 – Present
Skills Used: Spring Boot, ASP.NET Core, jQuery, Gitlab, SQLServer

- Modified user interfaces on several of LSU's web applications, resulting in better user experience and improving the accessibility of each individual website.
- Developed a scalable app feature to automate legacy ID conversion for a large dataset, saving at least 15 hours of manual work and ensuring seamless integration with the migration from mainframe to Workday.

PROJECTS

NBA Salary vs Performance Efficiency Analysis - Distributed Data Pipeline & Analytics
Project Link: `https://github.com/kamarceneaux/NBA-Performance-Analysis` **PySpark — Microsoft Azure — Hadoop**

- Leveraged PySpark to cleanse, normalize, and transform raw, unstructured scraped basketball data into Parquet files, optimizing the data for distributed analytics.
- Deployed and managed a two-node distributed cluster on Microsoft Azure, configuring Hadoop Distributed File System (HDFS) and Apache Spark to ensure reliable and cost-effective data processing.
- Created and deployed an interactive Streamlit dashboard that securely queried locally cached HDFS data, translating advanced analytical models into accessible visual insights

SKILLS

- **Programming Languages:** Python, Java, C#, C++, JavaScript, TypeScript, SQL, R, MATLAB
- **Development Frameworks:** React, Angular, ASP.NET Core, Spring Boot, Tkinter, Pandas, Numpy, Webpack, Databricks, LaTeX, OpenAI
- **Software Tools:** Git, Postman, Figma, Amazon Web Services (AWS), Microsoft Azure (Pipelines, App Registration, App Service) , Docker, Simulink
- **Certifications**: AZ-900 (Microsoft Azure Fundamentals)
